Job Description

We are seeking a **Tableau developer** who can implement ETL solutions for clients in different industries dealing with various types of challenging data. Candidates must have a knowledge of **SQL** Server, and some data modeling experience and **be proficient in UI/UX**. Exposure in handling Azure databases will be an added advantage. Candidates must have strong communication skills that allow you to regularly deal with the business, as well as with specialists from related fields, including database developers, and software engineers. You should be able to work as an independent team member, capable of applying judgment to plan and execute your tasks Candidates must have outstanding analytical and problem-solving skills and a good grasp of the technical side of business intelligence and always keep up to date with the latest BI tools and technologies.

Requirement

- Degree in computer science, information systems, or related field.
- Experience: 4+ yrs.

Follow Us

- A solid understanding of SQL, rational databases, and normalization.

Responsibilities

- Lead discussions with business partners to identify functional requirements resulting in development of system specifications and Tableau applications.
- Elicit business requirements and develop measurement plans for strategic programs.
- Creating prototype BI models, specifications, diagrams, and charts for BI front end applications including dashboards and reporting.
- Working closely with the Data Architecture team and providing technical design recommendations on the data mart structures which support analytical application.
- Administer all aspects of Tableau development and production environments including security and performance tuning.
- Developing and conceptualizing a comprehensive UI/UX design strategy for the brand.
- Producing high-quality UX design solutions through wireframes, visual and graphic designs, flow diagrams, storyboards, site maps, and prototypes.

Skillsets

- Expertise in handling all Tableau products (Desktop, Public, Server, Online, and Reader).
- Analyze large data sets and translate abstract data into highly visual and understandable.
- **Data Analysis, Data Visualization, Business Intelligence, RDBMS, Data Modelling**.
